DESCRIPTION

Niobium, also termed Columbium, is a shiny grey metal that takes on a bluish tinge when exposed to air at room temperature. Due to its low capture cross section for thermal neutrons, niobium has application in the nuclear industry. Niobium can be electrically heated and anodized to a wide variety of colours that makes it very attractive in the jewelery industry. Niobium is added to iron or nickel to produce alloys in the aerospace, medical and electronics industries.

APPLICATIONS

Capacitors; superconducting magnets; steel additive; nuclear reactors; optics.
